

2025 STEM Day at the Capitol

On January 31st, the Minnesota State Capitol was buzzing with excitement as more than 30 organizations came together for **STEM Day at the Capitol**. Hosted by the **Minnesota STEM Ecosystem** and **SciMathMN**, the event highlighted the importance of STEM education and workforce development in Minnesota.

From 1:00 PM to 4:00 PM, the **Rotunda** and **L’Etoile du Nord Vault** were transformed into a hub of hands-on, interactive, and student-focused STEM activities. Attendees, including students, educators, industry leaders, and policymakers, explored cutting-edge innovations in science, technology, engineering, and math. The event showcased programs designed to inspire the next generation of STEM professionals and address the growing workforce gap in these fields.

“STEM Day at the Capitol is an opportunity to demonstrate how STEM learning—both in and out of the classroom—drives innovation, strengthens our economy, and prepares students for future careers,” said Emily Saed, Director of the Minnesota STEM Ecosystem. “By bringing together our STEM Learning Partners, K12 and Higher Education, Businesses, and Policymakers, we can work collaboratively to expand access to STEM opportunities across Minnesota.”

The event featured robotics demonstrations, hands-on coding experiences, engineering challenges, and career exploration activities led by Minnesota’s top STEM organizations. [See the video recap HERE.](#)

Thank you to Xcel Energy for sponsoring STEM Day at the Capitol!
